

BaseAdapter

```
classDiagram
    class BaseAdapter {
    }
    class SavedProjectAdapter {
        + SavedProjectAdapter()
        + getCount()
        + getItem()
        + getItemId()
        + getView()
    }
    BaseAdapter <|-- SavedProjectAdapter
```

The diagram illustrates a class hierarchy. At the top is the 'BaseAdapter' class, represented by a rectangle with three horizontal compartments. The top compartment contains the class name. Below it are two empty compartments. A blue arrow with an open triangular head points from the 'SavedProjectAdapter' class below to the 'BaseAdapter' class. The 'SavedProjectAdapter' class is represented by a rectangle with three horizontal compartments. The top compartment contains the package name 'org.buildmlearn.toolkit.adapter.' and the class name 'SavedProjectAdapter'. The middle compartment is empty. The bottom compartment contains a list of methods: '+ SavedProjectAdapter()', '+ getCount()', '+ getItem()', '+ getItemId()', and '+ getView()'.

org.buildmlearn.toolkit.adapter.
SavedProjectAdapter

+ SavedProjectAdapter()
+ getCount()
+ getItem()
+ getItemId()
+ getView()
